CAREER DEVELOPMENT DATA ENGINEER

*Data drives the way, a
better world every day!*

EXECUTIVE SUMMARY

In this data-driven world, data engineer has become a vital role for a company. The presentation by PPG's rep. has emphasized the requirements for a data engineer before step into an industry, including the skill needed, attitude needed, and ability needed. They also talked about the hiring specifications which are very meaningful especially for us who will enter an industry in next few years.

INTRODUCTION

PPG, which is a global leading company in the manufacture and supply of paints, coatings, and specialty materials. Their experienced representatives have provided an very useful industrial talk for us who are a data engineering students, which enable us to know how are the things we learn now relate with our future job.

ROLE OF A DATA ENGINEER

There are four main tasks of a data engineer. First is designing pipeline to make sure the data flows efficiently. Second is data programming, which means writing code to manipulate the data. Third is data modelling, which is the process of designing the structure and relationships of a database. Lastly is data virtualization, which enable other to access and analyze it virtually via special platform.

HOW CAN WE GET HIRED AS A DATA ENGINEER?

Excellent in communication and organization skill. Having strong analytical, time management, and problem-solving skills.

Mastered in programming languages, especially MySQL. Advanced knowledge of MS Office and knowledge of ERP systems like SAP, Oracle is a plus

Having great attitude. A data engineer need to be willing to adapt to new tools, technologies, and best practices. Being a lifelong learner is crucial since since technology evolves continuously.

WHAT SHOULD WE DO BEFORE ENTERING AN INDUSTRY?

As a undergraduate, make sure we learn and remember all the basic knowledge. Join academic programs as many as we can to widen our horizon and strengthen our skills.

Enhance our communication skill. Brave to talk with other people, no matter if we use broken language. Stop reading a script, start understanding and elaborating by our own words.

REFLECTION

This is my first experience attending an industrial talk, which are leaving a strong impression for me since I still have no experience in working in a company. All the information I received are inspiring, especially the part which talked about the requirement to enter a company, including having excellent soft-skills and attitude and mastered in programming languages. This provide me a very clear and specific path to fulfil myself with these specifications during my college life. Furthermore, there are many technical terms which were mentioned in the talk like pipeline, power BI, data lake, data swamp and many more. This is important for me because I can do preparation early by exploring these things before stepping into an industry. What's more, at the end of the talk, there are some senior from my course shared their experience in study which are helpful for me in time management and study planning. All in all, this is a meaningful industrial talk for me and I am appreciate to those PPG representative who were willing to share their experiences to us.
