1. Gathering Requirements – Task Analysis

1.0 Introduction

Our group, Future Bright is committed to develop a multifunctional application, Medico, aimed to enhance the quality of care and support for individuals with disabilities, which mainly focus on individual with mental health challenges, individual with physical health limitations and users which need specialized attention. We are focusing to address three main problems which are facing by our target users, which are lacking of personal health knowledge, lacking of awareness on mental health maintenance and difficulty in medication management. In order to develop a comprehensive app, we find some apps which have similar function with our solution to conduct user testing.

i. SEHATI

SEHATI is a Malaysia's health care app launched by the Social Security Organization of Malaysia (PERKESO) that allow users to access to healthcare services and information conveniently. The PERKESO SEHATI provide a lot of healthcare services, especially the medical appointment booking system which offer a convenient and straightforward process for scheduling and booking appointment. Moreover, PERKESO SEHATI provide health monitoring and management which allow the user to view their health summary and also track their daily blood pressure and blood sugar levels.

ii. 7 Cups

7 Cups is an online platform and mobile app which provides emotional support and therapy services to those who are seeking for mental health assistance. This app offer a range of resources and features designed which allow the user to connect with licensed therapists and listeners. Inside the app, users can anonymously participate in some chatrooms to chat with people from all over the worlds. Moreover, they can connect with others who are facing similar problems with them.

Based on these two apps, there are three main tasks we want to observe during the user testing process:

Task 1: Health Monitoring and Management

This task involves evaluating the user experience in using and accessing the health monitoring and management features offered by SEHATI. The users need to enter their daily health data such as their blood pressure and blood sugar level and view their health summary. The main focus here is accessing the ease of accessing user's health information, tracking health data and navigating through this app.

Task 2: Medical Appointment Booking

In this task, users need to access the medical appointment booking system in SEHATI. They will try to schedule and book an appointment and make payment(if needed) through the app. The user will test the usability and efficiency of the appointment booking process, include examine the clarify of instructions, ease of finding a suitable clinic, ease of selecting appointment slots and overall user satisfaction with the appointment booking system.

Task 3: Mental Health Support

This task will be tested in 7 Cups app. This task focus on evaluating the mental health support and therapy services in the 7 Cups app. The user need to explore the various features including connect with a therapist or a listener, and also participating in available chatrooms. Moreover, the users can also access the AI mental supporter. The focus of user testing here is accessing the accessibility, effectiveness and overall user satisfaction with the mental health support in this app.

By conducting user testing of these three tasks, we hope to get precious feedback from those target user in order to improve our app development process.

2.0 Derivation of HTA

a) HTA for Task 1 - Health Monitoring and Management

User 1: Individual with Physical Health Problem

Link: <https://youtu.be/QYIkmS1HZdw>

Firstly, the users open the SEHATi application and users need to log in to their account. To log in to the account, users need to enter their email and passwords. After users log in to their accounts, users need to press add new. There will have two sections on the screen, which are the Self-Monitoring and Browse Tests. Users can choose the Self-Monitoring to fill in their weight, height, waist circumference, blood pressure and blood sugar, and then press the submit button. After submit the health data, the section will analyse the health data and show the analysed results with range from normal to high risk. After users are done, they will exit and close the application.

User 2: Elderly Individual

Link: https://youtu.be/F9bw4opa_f4

Firstly, the users open the SEHATi application and users need to log in to their account. To log in to the account, users need to enter their email and passwords. After users log in to their accounts, users need to press add new. There will have two sections on the screen, which are the Self-Monitoring and Browse Tests. Users can choose the Self-Monitoring to fill in their weight, height, waist circumference, blood pressure and blood sugar, and then press the submit button. After submit the health data, the section will analyse the health data and show the analysed results with range from normal to high risk. After users are done, they will exit and close the application.

User 3: Individual with Mental Health Problem

Link: <https://youtu.be/Az0WbMycANY>

Firstly, the users open the SEHATI application and users need to log in to their account. To log in to the account, users need to enter their email and passwords. After users log in to their accounts, users need to click on add new. There will have two sections on the screen, which are the Self-Monitoring and Browse Tests. Users can choose the Self-Monitoring to fill in their weight, height, waist circumference, blood pressure and blood sugar, and then press the submit button. After submit the health data, the section will analyse the health data and show the analysed results with range from normal to high risk. After go back to the previous page,

the users can press mental health/stress to check their mental health status, and then the users can click on Dass 21 result to check their depression, anxiety, and stress scale after completing the questionnaire. After users are done, they will exit and close the application.

Findings from the HTAs of Task 1:

Based on task 1, all of the users utilise the same platforms for health monitoring and management, which is SEHATi application. Generally, the tasks will kick start by opening the SEHATi mobile application, and then log in the SEHATi account with entering email and password. The users will first proceed to get around the icon and scroll downwards until there is add new options. Afterwards, there will be two sections, which are Self-monitoring and Browse Tests. The users can proceed to select the Self- monitoring, and then there will be a list of health data displayed on the application screen, for instance weight, height, waist circumference, blood pressure and blood sugar, which available users to fill in. After done fill in the health data, the users can proceed to press submit, and then the analysed health data results will be displayed on the screen.

Basically, the user 1, individual with mental health problem will utilise the mental health/stress service, where the user 1 can complete the questionnaires to check their mental health status, whereas the user 2 and user 3 didn't utilise the mental health/stress service.

Based on the surveys and interviews conducted, user 3 suggested that an advanced mobile application system should be implemented to further tackle the issue of lack of personal balanced diet suggestion, where the healthy diet guidance service can be implemented to guide the user based on their specific health condition.

b) HTA for Task 2 – Medical Appointment Booking

User 1: Individual with Physical Health Problem

Link: <https://youtu.be/TkG3vaxMHKo?si=H7zGjz-K1J4F8W6P>

Firstly, the user opens the SEHATi application and needs to log in to their SEHATi account by entering their email and password. After logging in, the user needs to find the "Market" icon and press it. Inside the market icon, the user needs to choose suitable health screening packages either getting a free body checkup if they're above 40 years old or opting for a paid body checkup if they're below 40. If the user's age is above 40, they need to click on the PERKESO photo and can add a free pap-smear to their cart. The user then needs to press the "Add to cart" button and continue by pressing "Continue" button. Then, the user proceeds by pressing the "Choose Clinic" button and selecting a convenient clinic for them. After ensuring the option is desired, they click the "Book Appointment" button and confirm their appointment by clicking it again. The user needs to select an available date and time and click "Book Now" button. Once the user is done booking their medical appointment, they will exit and close the application.

User 2: Elderly Individual

Link: <https://youtu.be/IGLdgUiqsgU>

Firstly, the user opens the SEHATi application and needs to log in to their SEHATi account by entering their email and password. After logging in, the user needs to find the "Market" icon and press it. Inside the market icon, the user needs to choose suitable health screening packages, either getting a free body checkup if they're above 40 years old or opting for a paid body checkup if they're below 40. After choosing health screening packages, the user needs to press the "Add to cart" button and continue by pressing "Proceed" button. Then, the user presses the "Search" icon, types their address, and presses the "Search Result" button. It will list clinics nearby to their address, and they click the clinic that is convenient for them. After ensuring the option is desired, they click the "Book Appointment" button and confirm their appointment by clicking it again. The user needs to select an available date and time and click "Book Now" button. Once the user is done booking their medical appointment, they will exit and close the application.

User 3: Individual with Mental Health Problem

Link: <https://youtu.be/5a4Fsm5pHbY>

Firstly, the user opens the SEHATi application and needs to log in to their SEHATi account by entering their email and password. After logging in, the user should find the "Market" icon and press it. We choose the "Icon view" option, which makes it easier to read and select suitable health screening packages. The user needs to press the "Add to cart" button and proceed by pressing the "Continue" button. Then, the user clicks on the "Choose Clinic" button and selects the clinic that is convenient for them. After ensuring the option is desired, they press the "Book Appointment" button and confirm their appointment by clicking it again. The user needs to select an available date and time and click "Book Now" button. Once the user is done booking their medical appointment, they will exit and close the application.

Findings from the HTAs of Task 2:

For Task 2, we observe that the first user, the second user, and the third user are utilizing the same application named SEHATi to book medical appointments for health checkups. Despite being in different roles, as a mental health user, physical health user, and elderly individual, they all perform the same action of scheduling appointments via the application, which is more convenient than waiting in long queues. Generally, the task begins with opening the SEHATi mobile application and logging into the SEHATi account by entering an email and password. Users then proceed to find the "Market" icon and press it. Here, various health screening packages are available for selection. Users aged above 40 can receive a free medical body checkup, while those below 40 need to pay for their checkup. Afterwards, users need to press the "Add to Cart" button and proceed by pressing the "Continue" icon. Then, they select a convenient clinic. After ensuring the desired option, users press the "Book Appointment" button to confirm their appointment. They must then select an available date and time and click "Book Now."

Basically, the users utilize the same method to book medical appointments. User 1 prioritizes ease of use and clarity in navigation, especially if they are dealing with mental health issues that could affect their cognitive functioning. User 2, who is a physical health user, may focus on the efficiency and accuracy of the appointment booking process, particularly if they have specific health concerns or conditions they need to address. They might be more interested in the details of the health screening packages offered, such as the specific tests included and their relevance to their health needs. User 3, a health-conscious senior citizen above 60 years old, may value clarity and guidance. They might require clearer instructions, larger font sizes, and additional support features for smoother navigation.

Based on the surveys and interviews conducted, all the users agree that an advanced medical appointment booking system should be implemented to enhance the SEHATi application's user experience. We can incorporate accessibility features, such as integrating a feedback mechanism that allows them to provide feedback on the medical booking system, and provide clearer instructions for the medical appointment booking system by having larger font sizes and additional support features for smoother navigation. Users emphasized preferences for clarity, simplicity, efficiency, and convenience in navigating the app and booking

appointments. By incorporating these design requirements and insights, SEHATi can optimize its user interface and functionality to cater effectively to the diverse needs and preferences of its users.

c) HTA for Task 3 – Mental Health Support

User 1: Individual with Physical Health Problem

Link: <https://youtu.be/TSYEJrqtncA>

Firstly, the users open the 7 Cups application and users need to log in to their account. To log in to the account, users need to enter their email and passwords. After users log in to their accounts, users need to press chat, and then a list of chatting sections will be displayed on the right of the screen. Users need to select chat live a listener, and then there will have two sections, which are connect now with the listener and start therapy with the therapist. Users can choose connect now with the listener, and then users can select up to 3 issues or topics they would like to chat about, where they can also provide more details about the issues. After that, press submit to search for available listeners and then start chatting with the connected listener. Besides, users also can enter the chat room by pressing groups on the left side and then chose any chatting room to enter. After users are done, they will exit and close the application.

User 2: Elderly Individual

Link: <https://youtu.be/ykLsJ1fuF5E>

Firstly, users open the 7 Cups application and need to log in to their account by entering their email and password. After logging in, users are presented with two services to choose from: Chat or Community. If the user selects the "Chat" option, they can engage in real-time conversations with listeners for support. Upon pressing the "Chat" button, users can find a listener by clicking on the "Find Listener" option. They then have the option to refine their search by selecting filters through the "Select Filter" icon. Once they've chosen a listener by clicking on their photo, they can proceed to initiate a chat session by pressing the "Leave Message" button. If the user selects the "Community" option, they can participate in various therapy sessions based on their preferences. Upon choosing this option, users can select the therapy they prefer from the available options. Next, they can explore and engage with interesting topics related to their chosen therapy by pressing them. Users can also search the community for relevant discussions and contributions. Finally, after utilizing the desired service, users can exit and close the application.

User 3: Individual with Mental Health Problem

Link: <https://youtu.be/TuyTIIczpX0>

For individual with mental health problem, the 7 cups app can address their problem effectively. There are several way to get mental health support from the app. First, user need to login the app with their username and password. Then, they will see a home page which consist of 3 main buttons, which are Therapy, Chat, and Community. If click the “Therapy” option, they will read a online therapy introduction and click “Start Online Therapy” to fill their personal information. However, this function is rechargeable but they can find a professional therapist. If they click “Chat”, they can choose to find a listener or chat in group. If user want to find a listener, they need to click “Find listener” and they can choose a listener from a list which show the listener’s detail, if they want to chat in group, they need to click “Groups” and enter one of the groups from a list. Lastly, if they want to join a community, they need to click “Community” and they can see virous community lists. They can choose one of them and they can post something inside. After done, they need to go back to home page and exit the app.

Findings from the HTAs of Task 3

The 7 Cups application offers a comprehensive platform for mental health monitoring and management, catering to individuals facing various mental health challenges. Upon logging in, users are greeted with a user-friendly interface comprising three main buttons: Therapy, Chat, and Community. Through the "Therapy" option, users can access online therapy services by providing personal information and connecting with professional therapists, albeit with a rechargeable feature. Alternatively, the "Chat" feature allows users to seek support either individually by finding a listener from a list or by engaging in group chats. Additionally, users can explore different communities within the app, participating in discussions and sharing experiences. With its intuitive navigation and diverse support options, the 7 Cups app provides a valuable resource for individuals seeking mental health support and guidance.

From the data gathered through surveys and interviews, it's clear that there's a growing appetite for more sophisticated mobile applications that cater to mental health support needs. While existing platforms like the 7 Cups app provide valuable services, users have highlighted areas for enhancement. One prominent suggestion is the implementation of multilingual support. By offering dual language options, the app could bridge linguistic barriers, ensuring that individuals from diverse backgrounds can access its resources and receive support tailored to their needs.

Furthermore, users have expressed a desire for expanded features beyond traditional text-based communication. Integrating multimedia elements such as image and video uploads could add depth and richness to user interactions. This not only enhances engagement but also diversifies the ways in which users can express themselves and connect with others, making the app more inclusive and appealing to a wider audience.

Lastly, there's a clear demand for a more comprehensive suite of mental health support services within the app ecosystem. In addition to online therapy and community support, users have suggested incorporating tools for guided meditation, mood tracking, and access to mental health resources. By offering a holistic range of features, the app can serve as a one-stop destination for mental well-being, empowering users to navigate their mental health journey with confidence and convenience.

3.0 Design Requirements

2. Gathering Requirements – User Analysis

1.0 Proposed Tasks

Our proposed prototype is MEDICO App. There are many useful features in our proposed prototype which focus on the improvement of the user experience around the services around the patient.

a) Design an integrated healthcare record management system

.....
An integrated healthcare record management system. Our platform consolidates personal health information from various sources, providing users with easy access and personalized insights. Users can securely upload medical test results and receive customized meal planning recommendations based on their health goals. Say goodbye to fragmented healthcare information and hello to a healthier you.

b) Creating an Online Chatting Platform

.....
Our online chatting platform with AI characters offers a supportive environment for users to connect, share experiences, and seek advice. Through virtual conversations, individuals can combat feelings of isolation and loneliness, particularly those affected by mental illness. Additionally, our platform features online consultations with professional therapists or doctors, providing confidential and convenient support for those facing barriers to traditional therapy. This cost-effective alternative ensures accessibility to essential mental health services, regardless of financial constraints.

c) Provide Free Online Consultation & Reminders

.....
Our comprehensive app leverages technology to address the healthcare needs of individuals, including those dealing with mental health issues, physical ailments, and the elderly. With free online consultations and appointment reminders, we ensure timely care and support for mental health concerns. AI notifications not only remind users to take medication but also alert family members, fostering a supportive environment. Additionally, our home healthcare service offers personalized attention to improve well-being and promote independence. Tailored features for the elderly, such as medication reminders and benefits assistance, make it easier for them to stay healthy and independent. Through these solutions, our app empowers individuals of all ages and health conditions to lead healthier, happier lives.

TASK

- Book medical appointment
- Schedule routine check-ups to catch any potential health issues early.
- Regular monitoring and management.

51 years old

Female

Married

Johor Bahru

GOALS

Dr. Arifah Bahar's goal is to discuss her concerns with a healthcare provider and receive a diagnosis or treatment plan with financial help. She aims to seek advice or guidance on lifestyle changes, nutrition, mental health concerns, or other health-related matters.

FRUSTRATIONS

Dr. Arifah Bahar faces significant challenges in booking a timely medical appointment due to limited financial resources. Due to the expensive cost of medical checkups, she could not afford going on for medical checkups regularly despite knowing that it can provide early detection of incurable diseases.

Dr. Arifah Bahar, a 51-year-old dedicated female lecturer at the University of Technology Malaysia, faces a problem of accessing regular medical checkups because of limited financial resources. She is motivated by the realisation of the importance of regular medical checkups as we age. As we age, our metabolism slows down and our immune system declines. Regular medical checkups can provide an early detection of incurable diseases.

She needs to find a solution to minimize the pain of financial strain associated with medical expenses while maximizing the gain of regular health monitoring for the elderly. Her goal was to find a platform that not only addressed the financial aspect but also catered to the needs of individuals with declining health.

Sia Hoe Jia (Individual with Mental Health Disorder)

Sia Hoe Jia, a 20-year-old Sabahan pursuing a Bachelor of Accounting with honors at Universiti Malaya Sabah, is driven by ambitious academic goals. Her dedication to achieving excellence in her studies is evident, as she invests considerable effort and time into her academic pursuits. However, amidst her academic aspirations, Sia often neglects her physical and mental well-being, frequently skipping meals and experiencing stomach issues as a consequence. This disregard for her health is compounded by her shy and reserved nature, which inhibits her from actively engaging with peers and forming meaningful connections. Consequently, she finds herself isolated and lacking a support network, further exacerbating her health concerns.

Additionally, Sia's frequent illnesses highlight the consequences of her unbalanced lifestyle. With her family preoccupied with work and unavailable to provide assistance, she is left to manage her health issues alone, resulting in prolonged periods of illness and recovery. This lack of support and guidance exacerbates her already challenging situation, underscoring the urgent need for her to prioritize self-care and seek assistance in managing her physical and mental health. By addressing these issues and fostering a healthier lifestyle, Sia can not only

achieve her academic aspirations but also ensure her overall well-being and resilience in the face of challenges.

3.0 Scenarios

Persona 1 from the user group

Persona:

Mrs. Kong, a 45-year-old housewife and business owner, managing a household and a photo shop with her family in Simpang Renggam, Johor.

User Goal:

Mrs. Kong primary goal is to prioritize her overall health and well-being while managing her family and business responsibilities. She aims to have a great physical health and mental health to make sure she can cope with the stresses of daily life.

Task:

- Track daily health data efficiently
- Book medical checkup appointment easily and straightforward
- Obtain mental health support in her busy life

Difficulty:

Mrs. Kong faces challenges in prioritizing her health in her daily schedule. First of all, she lacks of time due to managing both household and business things which make her difficult in focusing her overall health and well-being. She often finds herself ignore her health needs as her busy daily schedule, which lead to increasing in stress and fatigue. Moreover, with her limited free time, she need a user-friendly solution which can help her to book medical checkup appointment to avoid wasting time to walk in to the health centre or difficult in contacting the health centre. In addition, as she manage the daily stress of running a household and business, she may encounter stress and anxiety. Also, she may face specific women's issue. She may difficult to find a listener or solution to solve her problem. Over time, this may affect her mental health and overall well-being.

By and large, Mrs. Kong requires a comprehensive solution to address her physical and mental health needs while managing her busy life.

Persona 2 from the user group

Persona:

Dr. Arifah Bahar, a 51-year-old from Johor, currently serves as a lecturer at the University of Technology Malaysia.

User Goal:

Dr. Arifah Bahar's goal is to discuss her concerns with a healthcare provider and receive a diagnosis or treatment plan. She aims to seek advice or guidance on lifestyle changes, nutrition, mental health concerns, or other health-related matters.

Task:

- Book medical appointment
- Schedule routine check-ups to catch any potential health issues early.
- Regular monitoring and management.

Her Difficulty:

Dr. Arifah Bahar faces several challenges in booking medical appointment in the clinic as she needed to wait for a long line of patients that waiting to check in. With a sinking feeling on her legs, she realised that the medical appointment was not as quick and straightforward as she had hoped. After she finally reached the front desk and explained that she needed to book a medical appointment, the receptionist nodded understandingly but then informed her that the next available appointment wasn't for another three weeks. Her heart sank. She had been hoping to see a doctor sooner rather than later, especially since she had been experiencing concerning symptoms. Three weeks felt like an eternity to wait for answers and relief. She tried to negotiate for an earlier appointment, explaining the urgency of her situation, but the receptionist apologetically shook her head, citing a fully booked schedule.

Feeling frustrated and helpless, she left the clinic with a heavy heart. She couldn't understand why it was so difficult to access timely medical care when she needed it most. She walked back heavily to her car, knowing that she would have to continue waiting and hoping for a resolution to her health concerns.

Persona 3 from the user group

Persona:

Sia Hoe Jia, a 20-year-old Sabahan pursuing a Bachelor of Accounting with honors at Universiti Malaya Sabah.

User Goal:

Sia's goal is to prioritize her physical and mental well-being while excelling academically. She aims to establish a healthier lifestyle and seek assistance in managing her health issues.

Task:

- Identify available resources and support systems for academic and health needs.
- Seek assistance in managing physical and mental health.
- Incorporate healthy habits into the daily routine.

Her Difficulty:

Sia Hoe Jia faces several challenges in maintaining her physical and mental well-being. Firstly, her busy academic schedule often leads her to neglect her health, resulting in frequent stomach issues and fatigue. Despite her dedication to academic excellence, she struggles to prioritize self-care amidst her coursework and commitments.

Additionally, Sia's shy and reserved nature inhibits her from seeking support and forming connections with peers. This social isolation further exacerbates her health concerns, as she lacks a support network to turn to for assistance or guidance. Without a sense of belonging or companionship, Sia feels overwhelmed and alone in managing her health issues. Furthermore, Sia's family's preoccupation with work leaves her without the necessary support at home. With no one available to assist her in seeking medical attention or providing emotional support, she often feels overwhelmed and helpless in managing her health concerns. This lack of familial support adds an additional layer of difficulty to her already challenging situation, leaving her feeling isolated and unsupported in her journey towards well-being.
