

SAD

Waterfall Project Management

Analysis – Design – Implementation – Testing – Maintenance

Agile Project Management

Planning – Design – Build – Test (Looping) – Deliver

Utmost important skill is communication skill, make sure all team members are in synchronous.

Meet different people in each team.

Clear tasks distribution.

Monitor is important.

Clearly know all the things should be done.

Make sure all the things in on the right track.

Monitor all the progresses.

Scrum framework

3 roles important

1. Scrum master

- Monitor what should be done (follow plan)

- If having delay, what should be done as backup

- Make sure everything done in expected timeline

2. Product owner

- Give main idea.

- What features? Which product backlog need to be focused on?

3. Development team

- Team tester, Team API engineer, Team application

Daily scrum

- short, 15mins
- To know progress of each task
- To know daily target of each task
- Can solve many problem

Scrum retrospective

- SWOT analysis

S – Strengths

W – Weaknesses

O – Opportunities

T – Threats

WFA

- Working From Anywhere
- new norm

QNA

* How to determine which framework to use for a team.

ANS: Need to test with team members. The framework should suit all the team member's behaviour.

Scrum – famous. Use Azure DevOps to manage project. Focus on daily meeting to know the progress of each project.

* Business continuity management (BCM)

* What backup plan if some of the team members cannot complete their tasks/ put full commitment/ late to submit

- hire a redundancy developer/ worker as backup.
- Multi-tasking person.
