1.0 Introduction

In Task 1 of the project, our group, "Network Nexus," was assigned to design a floor plan for the new 2-storey building, N28C, for the Faculty of Computing (FC). This building is being developed to accommodate the projected 15% increase in student and academic staff populations over the next four years. The facility will feature essential spaces, including four labs, a video conferencing room, a hybrid classroom, and a student lounge equipped with Wi-Fi connectivity.

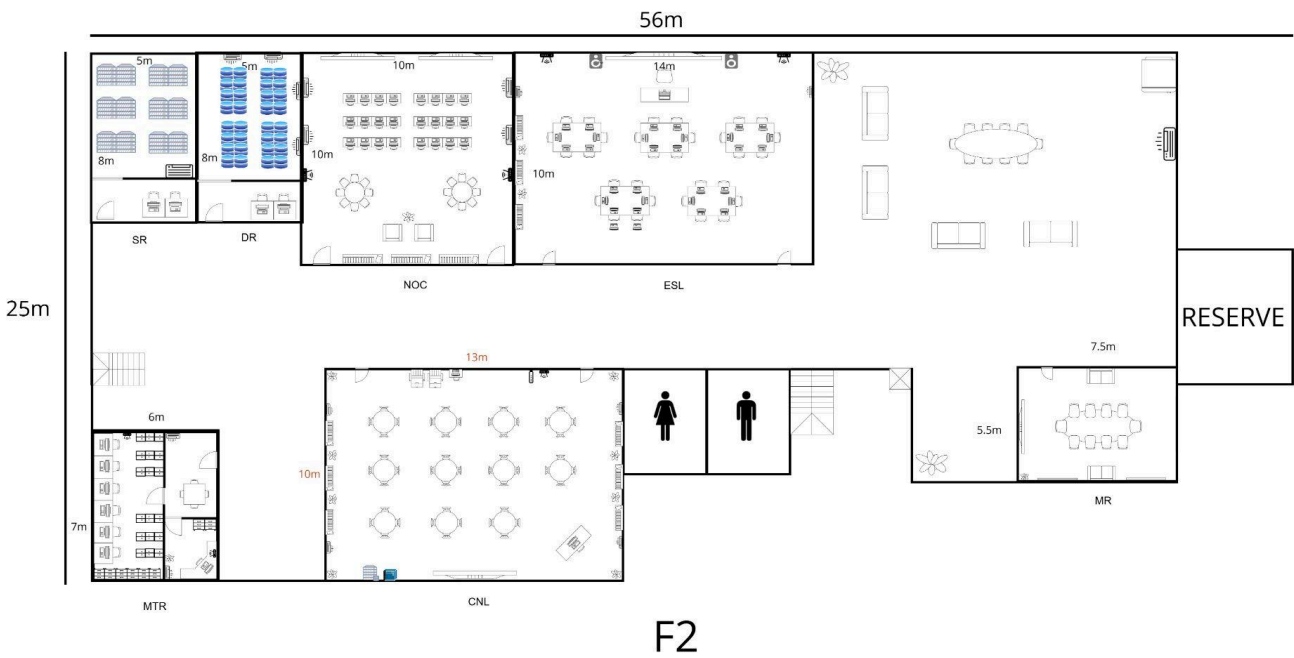

The design aligns with the Faculty's objective of creating a scalable, cost-effective, and future-ready environment. It will support high-speed internet connectivity, robust network security, and future wireless capabilities, while ensuring efficient space and resource utilization. Our team has developed a floor plan that meets these requirements and supports the FC's vision for growth and technological advancement.
