

DATA MINING (SECP2753)

SEM II 2024/2025

ASSIGNMENT 2 - ASSOCIATION RULES MINING

TOPIC	
T1	Methods/Approaches in Association Rules: (1) Apriori Algorithm (with example) - Overview - Generate candidate itemsets - Prune non-frequent itemsets - Generate association rules (2) Advantages vs. Disadvantages of Apriori Algorithm (3) Applications of Association Rules (4) Challenges in Association Rules Mining
T2	Methods/Approaches in Association Rules: (1) Frequent Pattern (FP) Growth Algorithm (with example) - Overview - Construction of FP-Tree - Mining frequent patterns from FP-Tree - Benefits of FP Tree structure (Completeness, Compactness) (2) Advantages vs. Disadvantages of FP Growth Algorithm (3) Applications of Association Rules (4) Challenges in Association Rules Mining
T3	Methods/Approaches in Association Rules: (1) Elcat Algorithm (with example) - Overview - Vertical Data Format - - Mining frequent itemsets using Eclat (2) Advantages vs. Disadvantages of Elcat Algorithm (3) Applications of Association Rules (4) Challenges in Association Rules Mining
