

FACULTY OF COMPUTING UNIVERSITI TEKNOLOGI MALAYSIA

DATA MINING (SECP2753)
SEM II – 2024/2025

PROJECT 1

INSTRUCTIONS:

- 1. Dataset Use:** You are asked to use the dataset from a previous assignment and apply four different classification algorithms. Perform appropriate data processing methods on your dataset.
- 2. Data Preparation:** Requires appropriate preprocessing techniques before model building.
- 3. Model Development:** You need to build four classification models, each targeting 2–3 specific business insights.
- 4. Model Evaluation:** Involves assessing the performance of each model and comparing the results.
- 5. Documentation:** You must describe preprocessing steps, sampling strategies, and analytical outcomes in a written report.
- 6. Report Guidelines:** The final report should be 10–20 pages, including visual elements like graphs or snapshots.
- 7. File Naming:** Submit the report as a PDF using the format: groupname_project1.pdf

INSTRUCTIONS:

☐ Total marks **(20%)**.

☐ Marking Breakdown:

- ☒ 5%: Explanation of data processing and sampling procedures.
- ☒ 5%: Ability to evaluate and compare model performance.
- ☒ 5%: Discussion and interpretation of results.
- ☒ 5%: Technical report quality, including clarity in presenting the analytics model development.

☐ Submission Details:

- Due date: Submit via e-learning on **9th June 2025 (before 10PM)**.
