

Data collection

Question for UTHM:

General Architecture & Integration

1. **Current Integration:** "Currently, do the Student (SMAP), Finance (ePayment), and HR systems automatically exchange data with each other, or does the IT team have to manually transfer data files between them?"
 - *(Goal: To confirm the "Information Silo" problem).*
2. **Single Sign-On:** "Do students and staff need to log in separately for each system (SMAP, Author LMS, HRMIS), or is there already a single ID (Single Sign-On) that works for everything?"
 - *(Goal: To validate the need for SAP BTP's Identity Authentication).*
3. **Reporting:** "If top management needs a report combining Student Data and Financial Data (e.g., 'List of students who haven't paid fees'), is this report generated automatically or manually created in Excel?"
 - *(Goal: To highlight the need for SAP S/4HANA's real-time analytics).*

Student Information System (SMAP)

4. **Real-Time Updates:** "When a student registers for a subject in SMAP, how long does it take for that information to appear in the AUTHOR LMS? Is it instant, or is there a delay?"
 - *(Goal: To identify the data synchronization gap).*
5. **Data Accuracy:** "Do you often face issues where a student's personal details (like address or phone number) are different in SMAP compared to the Finance or Library systems?"
 - *(Goal: To validate the need for a 'Single Source of Truth' in SAP).*

Financial System (ePayment)

6. **Payment Sync:** "When a student pays their fees via ePayment, does their status in the Student System (SMAP) update immediately to unlock course registration, or is there a waiting period for verification?"
 - *(Goal: To validate the 'Bottleneck' problem).*
7. **Staff Claims:** "For staff members claiming expenses, is the submission and approval process fully digital and linked to the payroll system, or is paperwork still required?"
 - *(Goal: To find functional requirements for the SAP Finance module).*

Human Resources (HRMIS)

8. **User Access Management:** "When a new lecturer joins UTHM, does the HR system automatically create their account for the Learning Management System (LMS), or must IT staff create it manually?"
 - *(Goal: To verify the integration between HR and IT systems).*

Infrastructure & Technology

9. **Cloud Readiness:** "Is UTHM currently hosting these systems on local servers (on-premise) inside the campus, or have you started moving any systems to the Cloud?"
 - *(Goal: To check technical feasibility for SAP BTP).*
10. **Mobile Access:** "Is there a single mobile app where students can check grades, pay fees, and access course materials, or do they have to use mobile web browsers for different sites?"
 - *(Goal: To propose a unified mobile interface via SAP BTP).*
