

Lab Assignment 1: Daily Activities Recorder App

Apply Flutter basics from Lessons 1–3 by building a simple app that records and displays daily activities.

Deadline

16 April 2026

Submit via **eLearning**

Objective

The purpose of this lab assignment is to help students apply the basic concepts learned in **Lesson 1**, **Lesson 2**, and **Lesson 3** in Flutter development.

You will build a simple Flutter application that can record daily activities. The app should allow users to enter activity information and display the recorded activities on the screen.

What you will practise

- Flutter project structure
- Widgets and layout
- State management using `setState()`
- Text input using `TextField`
- Displaying data in a list

Task Description

Develop a simple Flutter app called **Daily Activities Recorder App**.

The app should allow the user to:

1. Enter a daily activity
2. Enter the time or category of the activity
3. Save the activity
4. Display the list of recorded activities
5. Delete an activity from the list

Examples of daily activities

Wake up	Breakfast	Class
Exercise	Study	Sleep

Example data entries

Activity: Study Flutter	Time/Category: 8:00 PM
Activity: Jogging	Time/Category: Exercise

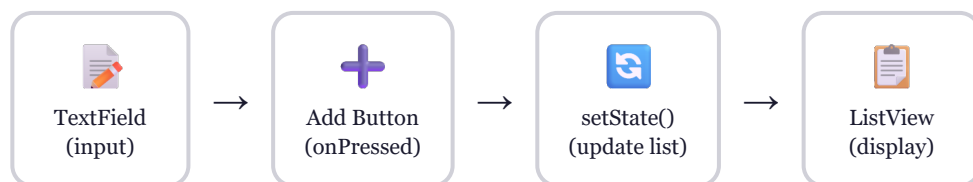

Scope of the System

The system only needs to be **simple** and use the topics covered in the first three lessons. No database, no complex state management — just the basics.

Suggested features

- A text field for activity name
- A text field for activity time or category
- An Add button
- A list of activities displayed on the screen
- A Delete button for each activity

How the App Works

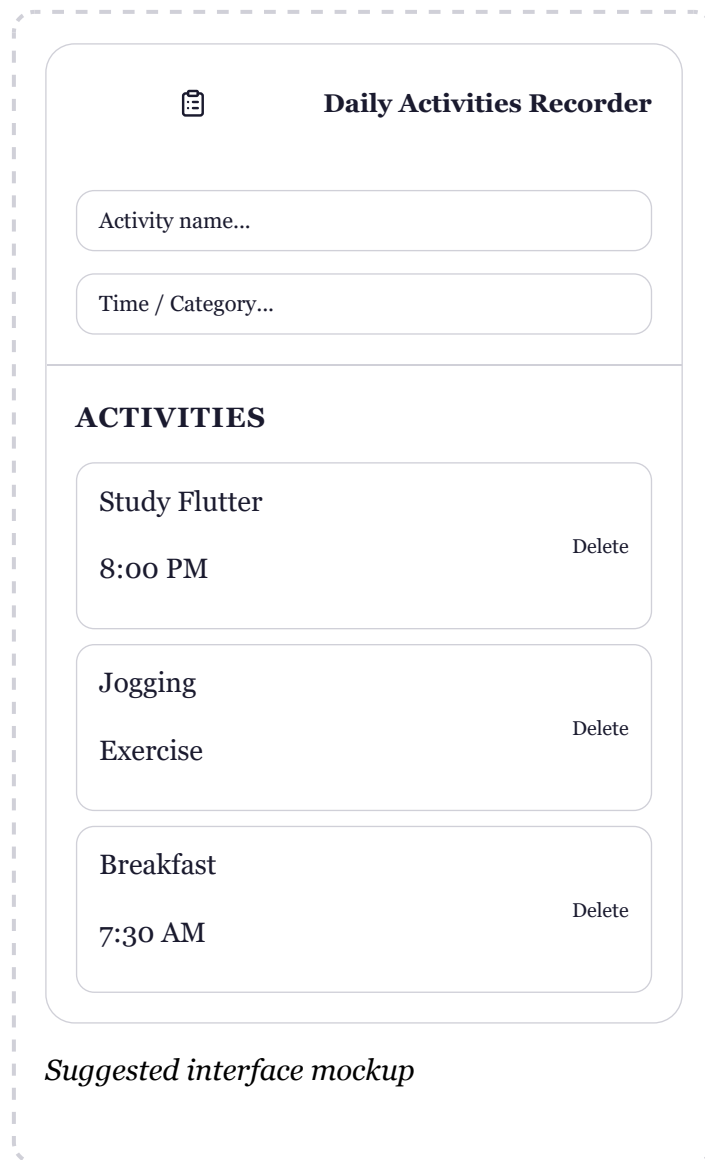

Data flow: user input → add → state update → list rebuild

Suggested Interface

The interface may include:

- An `AppBar` with the title "Daily Activities Recorder"
- An input field for activity name
- An input field for time/category
- An Add Activity button
- A list of activities below the form

Requirements

Students must develop the app using Flutter. The app should include:

Flutter App Development Course

At least 2 input fields

At least 1 button to add activity

Use of StatefulWidget

Use of setState()

ListView or equivalent to display list

Simple and clear user interface

Report Requirement

Students are required to prepare a short report in **Word** or **PDF** format.

The report must include

1. Title of the assignment
2. Objective
3. Brief description of the system
4. Explanation of the interface
5. Screenshots of the app
6. Conclusion

Guide for interface explanation

Students should explain the main parts of their interface, for example:

- The function of the activity input field
- The function of the time/category input field
- The function of the Add button
- The function of the activity list
- The function of the Delete button

Submission Instructions

What to submit

1. **ZIP file** of the Flutter project
2. **Report** explaining the interface (Word or PDF)

Submission platform

Both files must be submitted in **eLearning**.

Deadline

16 April 2026

Marking Focus

Assessment will focus on:

Criteria	Focus Area
Flutter Implementation	Correct use of Flutter framework and Dart syntax
Widget Usage	Proper use of StatefulWidget, TextField, ListView, etc.
Functionality	Add and display activities working correctly
Interface Clarity	Clean, simple, and user-friendly interface
Report Quality	Clear explanation of interface with screenshots

Quick Summary

Checklist

- 2 input fields
- 1 add button
- List of activities
- Delete function
- Use `StatefulWidget` and `setState()`
- Submit: ZIP file of code + report explaining interface
- Platform: eLearning
- Deadline: 16 April 2026
